

PRD Addendum: Safaricom Daraja Advanced Extensions

Integration Specifications for M-Pesa Ratiba (Standing Orders) & M-Pesa Bill Manager (E-Invoicing)

Supplementary Module to the InuaBiz Main Technical PRD & IntaSend Integration Guide

Author:	Zachariah Komu Nyokabi (Full-Stack / AI Engineer)	Target Stack:	Safaricom Daraja 2.0 API, Supabase Edge Functions
Product Context:	InuaBiz Multi-Tenant POS & Billing Engine	Document Version:	v1.0 — Advanced Feature PRD

1. Executive Summary & Context

This Product Requirements Document (PRD) Addendum defines the technical and operational specifications for incorporating two advanced Safaricom Daraja 2.0 products into the **InuaBiz** SaaS ecosystem: **M-Pesa Ratiba** and **M-Pesa Bill Manager**. These additions enhance subscription retention for the platform and expand B2B invoicing features for onboarded vendors.

Strategic Staging Strategy

While core launch payments rely on **Lipa Na M-Pesa Express (STK Push)** and third-party gateways (IntaSend), these two capabilities serve as immediate post-launch extensions to automate recurring platform collection and power vendor-to-customer bill notifications.

2. Feature Specifications & Roadmap Matrix

Feature Module	Target User	Core Capability	Implementation Phase
M-Pesa Ratiba	InuaBiz Super Admin & Vendors	Automated standing order auto-debit for monthly KES 3,000 SaaS subscription fees.	Phase 2 (Automated Billing)
M-Pesa Bill Manager	Vendors & Wholesale Clients	Pushes formal digital invoices into customer M-Pesa Super App menus with direct one-tap payment.	Phase 3 (Enterprise B2B)

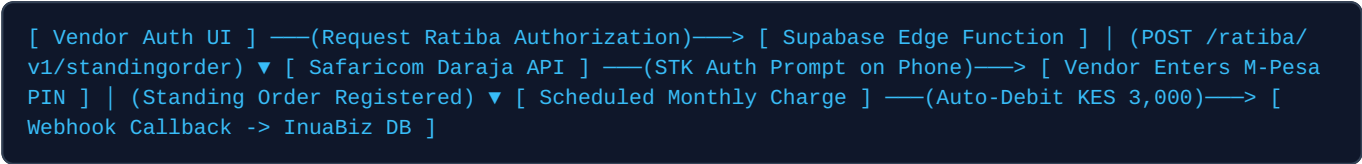

3. Module 1: M-Pesa Ratiba (Native Subscription Auto-Debit)

3.1 FUNCTIONAL REQUIREMENTS

- One-Time PIN Opt-In:** Upon expiration of the 14-day free trial or during manual upgrade, the vendor is prompted to authorize a recurring monthly debit of KES 3,000.
- Standing Order Schedule Setup:** Sets up a monthly recurring frequency (Interval: Monthly, Day: Day of signup).

- **Zero-Friction Renewals:** Payments trigger automatically on the due date without requiring manual STK prompt responses or app logins.
- **Retry & Expiry Fallback:** If an account has insufficient funds on billing day, Ratiba executes up to 3 automatic retries over 72 hours before temporarily locking tenant write access.

3.2 TECHNICAL WORKFLOW & SEQUENCE

3.3 DATABASE EXTENSIONS (`TENANT\_SUBSCRIPTIONS` TABLE)

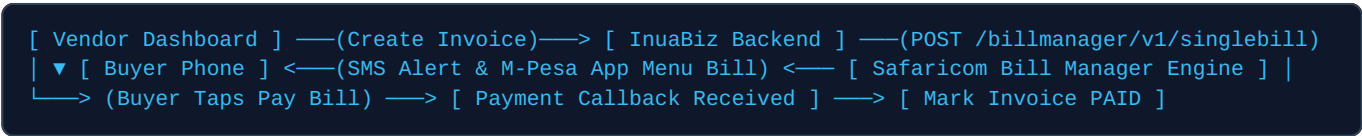

Column Name	Data Type	Description
ratiba_standing_order_id	VARCHAR(100)	Unique ID returned by Safaricom Ratiba API upon successful opt-in.
auto_debit_enabled	BOOLEAN	Flags whether native standing order is active for the tenant.
next_billing_date	TIMESTAMPTZ	Timestamp for the next automated Ratiba deduction.

4. Module 2: M-Pesa Bill Manager (Digital E-Invoicing)

4.1 FUNCTIONAL REQUIREMENTS

- **Invoice Push to M-Pesa Menu:** Vendors can generate wholesale or bulk order invoices that push directly into the buyer's M-Pesa menu and SMS.
- **Pre-Filled Payment Interface:** When the buyer opens their M-Pesa menu under "Bill Manager", the exact invoice amount, account reference, and vendor Paybill/Till are pre-configured.
- **Automated Payment Reconciliation:** When paid through Bill Manager, Safaricom fires a callback that marks the specific invoice in InuaBiz as "PAID" instantly.

4.2 TECHNICAL WORKFLOW & SEQUENCE

5. Developer Portal Credentials Mapping

To support these advanced features alongside core payments, the following Sandbox App mapping was selected during initial registration:

Daraja Sandbox App Option	Mapped Product Feature	Status in Portal
Lipa Na M-Pesa Sandbox	M-Pesa Express / STK Push for instant customer checkout.	ENABLED (Checked)
M-Pesa Sandbox		ENABLED (Checked)

Daraja Sandbox App Option	Mapped Product Feature	Status in Portal
	C2B / B2C / B2B APIs for background payment listening and payouts.	
M-Pesa Ratiba Sandbox	Native recurring standing orders for platform subscription auto-debit.	READY FOR PHASE 2 MAPPING
Bill Manager Sandbox	Generic E-Invoicing APIs for vendor-to-customer bill notifications.	READY FOR PHASE 3 MAPPING

6. Summary & Action Items

1. Maintain current focus on ****STK Push (Lipa Na M-Pesa Express)**** for the immediate MVP release.
2. Integrate ****M-Pesa Ratiba**** during Phase 2 to eliminate subscription drop-off and manual renewal friction.
3. Deploy ****Bill Manager**** in Phase 3 as a value-add feature for high-volume B2B vendors using InuaBiz.
